

FFW: Going places with your containers

Description: Eager to build and use a container but you're not sure just how or where to start? This webinar will demonstrate how to build simple working containers using Docker and Jupyter Notebooks from which you can scale up or make more complex, as you need. Participants should have an understanding of what containers are and can do, and know basic command-line prompts. (see the January 25 FFW on "Making your life (and analysis) easier with containers" on this wiki page: <https://wiki.cyverse.org/wiki/display/Events/FFW%3A+Going+places+with+containers>)
